A B S T R A C T

A disposable diaper includes a basic absorbent batt structure and a supplementary absorbent batt structure placed
5 on the basic absorbent batt structure. The diaper is formed
with a feces receiving space surrounded by the supplementary
absorbent batt structure and bottom and side surfaces of a
cavity and extending from a crotch region toward a front waist
region so that an upper opening of the cavity is partially
10 uncovered in the crotch region 31 and thereby forms a feces inlet
leading to the space.
